

CSCI E11 Digital Multimedia Art

Roy Pardi, Instructor, Harvard University Extension School

Final Project

Description:

For the final project you can explore any ideas you wish. It should be a substantial effort as it represents 40% of your class grade. You can choose to use timeline-based methods, Actionscript or some combination of the two. You do not have to use scripting if you prefer not to. If you do use scripting, you **MUST** write ALL the scripts yourself – “borrowed” code will not be accepted for the final project.

Format:

Slight change here: You can publish your project for playback within a browser (html & swf formats) OR as a projector (Mac please).

Also compress the source (.fla) file as a .zip archive and place that online so I can download it. Once you have uploaded your project you should send me the URL in an email (e11@roypardi.com) along with a short description of what you were trying to do and what technical or other issues (if any) you encountered.

Please do NOT send me the source- send me a LINK to it.

Due Date:

11:59 EST May 15, 2007 (this is the night before class). Your project should be ready to present in class, so test your links!
